**** BOIL WATER ADVISORY LIFT NOTICE ****

FOR CUSTOMERS OF THE CITY OF CAMDEN WATER, PWSID NJ0408001

CAMDEN, NJ - Customers of City of Camden Water were notified on July 28th of a possible problem with the drinking water due to low water pressure resulting from a water main break. Residents were advised on both July 28th and 29th to boil the tap water before using as a precautionary measure until repairs were made and testing results show the water quality to be safe. The City of Camden and American Water are now pleased to report that the repairs have been completed and subsequent water quality testing shows the water quality to be safe.

THE BOIL WATER ADVISORY IS LIFTED and it is no longer necessary to boil your water before using. The following measures are strongly encouraged at this time:

- Run your water faucets for 3-5 minutes to flush your service connection and interior plumbing with water from the service main.
- Empty and clean your automatic ice makers and water chillers.
- Drain and refill your hot water heater if the temperature is set below 113 degrees Fahrenheit.
- Service connections with a water softener/cartridge filters should be run through a regeneration cycle or other procedures recommended by the manufacturer.
- Water reservoirs in tall buildings should be drained and refilled (as applicable).

We apologize for any inconvenience and thank residents for their patience. If customers have any questions they can contact the American Water office during business hours at 856- 635-1496. Residents can also visit the American Water website at www.aw-connect.com/camden for further information.
